

Controlling flies in the barn.

by Jennifer Roberts

We all love spending time in the barn with our horses; but sometimes, the bugs can, well, bug us. While flies may be a fact of life, we can limit their numbers, allowing us to enjoy the time that we spend in the barn even more. Check out our quick tips for telling the bugs to “Bug Off” in these hot months to come.

Keep It Clean

While it may seem like a no brainer, keeping your stalls clean and dry will make it considerably less enticing to the flies. Manure is a tasty snack, and warm moist environments make the perfect place to lay eggs. Consistent stall cleaning will significantly cut down on the amount of flies in the barn. (Pro Tip: Clean the sunny stalls first! Flies like light areas and tend to avoid the dark stalls.)

Keep It Fresh

Consider using a horse stall refresher, such as Sweet PDZ in your stalls. In helping to manage the moisture content, it's drying effect and sharp surface area dries and kills many insects. Sweet PDZ is a safe, organic and natural alternative to add to your pest control programs. Sweet PDZ is not an insecticide.

Keep It Covered

From garbage to grain, flies are always on the lookout for their next meal. Keep potential

foodstuffs covered and sealed to keep them out. (It's also far more sanitary to keep all critters away from the grain.)

Keep It Moving

Consider using fans to keep air circulating throughout the barn. This will deter flies from landing, encouraging them to find a new place to hang out. And, let's face it; a little breeze on a warm day is always welcome.

Keep It Dry

Standing water attracts flies, so keep it out and away from the barn! Make sure that all drains are working properly and directing water away from the barn. If water is spilled, use shavings or horse stall refresher to absorb the extra moisture before it can draw in the extra insects.

Keep It In Perspective

Unfortunately flies are a fact of life around the barn, however you can limit their numbers. Follow these tips and send the bugs flying.

Article provided by Sweet PDZ. The company has been keeping stalls healthy for over 33 years and continues to be the leading horse stall freshener on the market. This organic (OMRI Listed), non-toxic mineral captures, neutralizes and eliminates harmful levels of ammonia and odors. Sweet PDZ is a far superior alternative to lime products for ammonia removal and moisture absorption. For more information, visit SweetPDZ.com, and visit Manna Pro Products at MannaPro.com for a dealer locator.
